

Solar Eclipse Classroom Investigations

October 4th, 2023 | 12:30 - 1:30pm PDT

Prepare your class for the upcoming eclipses with these Solar Eclipse Classroom Investigations! Your students will love these hands-on activities designed specifically for these astronomical events!

Solar eclipses are truly magical events that provide insight to phenomena far greater than what happens to sunlight down here on Earth. Beyond planning to watch the occurrences **(October 14, 2023 annular solar eclipse | April 8, 2024 total solar eclipse)**, prepare to engage your students with interactive activities that highlight the importance of the sun.

We invite you to join us for this 60-minute session to plan for the upcoming eclipses with methods to interest students in the world around them (even if it is a bit out of this world).

Activities include:

- Measuring how much cooling an eclipse provides
- Modeling the change in light from the sun during an eclipse
- Using a pinhole camera to image the sun

Can't attend live? Register anyway and we'll send you a recording of the session. Registrants will receive a certificate after completing a brief quiz following the webinar.
